Hi at all,

some of us like to play movies in win$ powerpoint.
So I have wrote a litle routine to convert our animations to mpeg.
The result mpeg is always black on black frames in win$ but with xanim
it is ok.
I am not a powerpoint expert. Did someone know if it's possible to use
only 24bit color coded mpegs or 8bit too.
I believe it's the 16bit why it is always black.

Any help would be fine

regards

Reimar
