Subject: history broken under linux rh8.0/ gnome-terminal
Posted by olivier.archer on Wed, 16 Oct 2002 13:50:18 GMT

Hi,
 using arrow to recall a ligne seems to be broken under
rh8.0/gnome-terminal. I cant go back trought history line or just move
cursor left. Do you have experienced the problem ?

I've just made some little investigation using strace:

under rh 7.3, when i hit the left arrow key, i've got:
```
read(0, "\33", 1)              = 1
read(0, "[", 1)             = 1
read(0, "D", 1)               = 1
```

but under 8.0, its:
```
read(0, "\33", 1)               = 1
read(0, "O", 1)               = 1
read(0, "D", 1)               = 1
```

so "[" became "0". something is mapped by gnome-terminal, who is
confusing idl. I've try to disable KeyBinding and default profile,
without succes.

Other applications seems to work well (tcsh, matlab, perldl, octave etc...)

thanks for help
