There's also a tool to convert Emacs buffers to HTML, with all background
and faces, etc. -- htmlize:

http://fly.srk.fer.hr/~hniksic/emacs/htmlize.el

XEmacs bundles it, I believe. Keep in mind that in IDLWAVE, keywords on
continuation lines are correctly highlighted only on global font-lock
passes (like when you first load the buffer, of if you explicitly
font-lock-fontify-buffer).
