: Hi,
: using arrow to recall a ligne seems to be broken under
: rh8.0/gnome-terminal. I cant go back trough history line or just move
: cursor left. Do you have experienced the problem ?

I have noticed the same problem. So far the only solution I have found is to use other terminal with IDL (at least rxvt seems to work). My wild guess is that the problem has something to do with UTF-8 encoding, which is now default in RedHat. Although I did not choose it, some settings probably went wrong during system upgrade.
