Try running call_external() function on linux and HP-UX, seperately.
Same C code.

On linux 2.4.9-31, gcc-2.96, IDL 5.4
gcc -c -fPIC -g -Wall test.c to get obj file
ld -shared -o test.so test.o to get lib file

Give "File size limit exceed (core dump)" (.so file is only 38K)
Then jump out of idl.

On HP-UX, IDL 5.3
cc +z -C test.c
ld -b -o test.sl test.o

No problem.

Any hint on why it happens?
