Hi JD,

I don't hold out much hope for you on this one.

I have a utility that lists all the currently managed widgets in a hierachial fashion, and using a very simple widget consisting of only base, list widget and a stop button, my utility shows only 3 widget ids. Nothing at all to suggest that individual lines within the value of the list widget can be "got at."

Neither does the v5.6 Help offer much.

I presume you want to de-sensitise an element that's already been selected?

Andrew
