Subject: calling a function

Dear all, I have a problem!

I have a program (main.pro) written in IDL. Then, inside the main.pro

I want to use a function that I found on Goddard library.

The function is named glactc.pro, and the calling sequence is the following:

GLACTC, ra, dec, year, gl, gb, j

How can I call glactc.pro inside main.pro?

After that, when I compile the program, do I have to link

glactc.pro? If yes, how can I do that?

Is it possible to write "makefile" (like C programming) into IDL?

Thank a lot!

regards, Steve
