Dear all, I have a problem!
I have a program (main.pro) written in IDL. Then, inside the main.pro
I want to use a function that I found on Goddard library.
The function is named glactc.pro, and the calling sequence is the
following:
GLACTC, ra, dec, year, gl, gb, j
How can I call glactc.pro inside main.pro?
After that, when I compile the program, do I have to link
glactc.pro?If yes, how can I do that?
Is it possible to write "makefile" (like C programming) into IDL?
Thank a lot!
regards, Steve
