```
Pro test
set_plot,'ps'
set_plot,'win'
!p.font=1
plot,x,y,xtitle='TEST TTF'
end
```

In win figure, the title is much shorter than that in PS. How to change it?
Sometimes there are many text in the figure, when I use xyouts to put them
in the correct position in WIN, they are not on the correct position in PS.

Best
