
Subject: CAT, DOG, 1.7 AND FISH IN IDL

To Group,

```
x=[2,4,6,8]  
y=[200,400,600,800]  
plot,x,y
```

One gets a plot. But not what I want.

I need to replace the x-axis with the following axis:

```
where x=2, a label 'cat'  
where x=4, a label 'dog'  
where x=6, a label '1.7'  
where x=8, a label 'fish'
```

I know how to suppress the original x-axis, but don't know how to put the new one in. I am not into object graphic either.

Thanks in advance,
Mark
