
Subject: Automatic scrolling of a WIDGET_DRAW

Hi everyone!

I'm using IDL v3.6.1.

In an application of mine I'm using a WIDGET_DRAW with /scroll
(only vertical) to display large images.
Now the customer wants an automatic mode, causing the
image to be automatically scrolled (smoothly) from
top to bottom without ANY user interaction.

I first thought of setting the value of the scrollbar
in some way - but I have no reference to the scrollbar,
only the widget_draw itself (And it has no children).

Does any of you GURUs have a clue?

Hopefully waiting for suggestions...

Frank J. OEynes
