Subject: How to plot error bars in IDL Object Graphics (e.g.: IDLgrPlot) Posted by bringezu on Mon, 02 Dec 2002 15:30:02 GMT

Hi all,

I would like to plot error bars in IDLgrPlot. However, IDLgrPlot does only accept, x, y and not "ye" as error of the y-values. In direct graphics I have used "errplot ..." for this purpose. In object graphics I thought I could find a method in IDLgrPlot but there is nothing like this. Any help appreciated, Regards, Frank
