Subject: slider widget with custom scale

Hi all,

I would like to have a slider with a non-linear scale like

0 - 0.5 - 1 - 2 - 10.

Is there a convenient way to achieve this or do I have to build my own `cw_custom_slider` for this?

I am thinking about just passing an array containing the slider values or a function that maps the linear scale to my scale.

Thanks for all tips,

Sebastian
