Subject: slider widget with custom scale Posted by Sebastian Loebbert on Mon, 02 Dec 2002 14:48:01 GMT View Forum Message <> Reply to Message

Hi all,

I would like to have a slider with a non-linear scale like 0 - 0.5 - 1 - 2 - 10.

Is there a convenient way do achive this or do I have to build my own cw_custom_slider for this?

I am thinking about just passing an array containing the slider values or a function that maps the linear scale to my scale.

Thanks for all tips,

Sebastian
