Hi,

thanks for all the suggestions to solve my problem with mouse
and widgets. What finally solved the problem was the following:

* use wtaddhandler to handle events in my 'drawarea':

  status=wtaddhandler(drawarea,ButtonPressMask,'mousecoord')

  with ButtonPressMark the call back procedure 'mousecoord'
  is called when a button on the mouse is pressed.

* in the callback procedure mousecoord I use the routine wtpointer
  with GetLocation:

  status=wtpointer('GetLocation',draw,mouseinfo)

  mouseinfo is an array containing information on the mouse,
  mouseinfo(4) and mouseinfo(5) contain the x and y coordinates
  in device coordinates.

Harmen
