Subject: How can I print large PS polygons from PV-WAVE?
Posted by iarla on Fri, 16 Dec 1994 17:30:15 GMT

As many of you will be aware, there is a limit on the maximum size
of polygon that PV-WAVE thinks postscript can print, being a polygon
of 750 points. I routinely deal with complex contours made up of
several thousand point polygons and currently can't print them.

Does anybody have a work around for this; even a satisfactory way
of splitting up the polygons would be grateful.

Many thanks and happy Christmas.
