Subject: Using trackball to rotate an image
Posted by pushyar on Tue, 03 Dec 2002 04:59:46 GMT

HI..
  I could rotate a cube using trackball in all directions. I want to
rotate a 3D image inside a cube. When i rotate the cube, the image
inside the cube should also rotate. I want to do this using trackball
object.
 Can anybody tell me if there's a way to set the cube as transparent
and the 3D image inside the cube to rotate along with the cube?

 Please help me.

 Cheers,
 Akhila.
