Folks,

Did you see what the elves brought us this Christmas!?

In IDL 5.6 Windows version you can grab a piece of code out of a window and paste the whole darn thing at the IDL command line! Hooray!!!

Productivity at my place has just gone up 178%.

Cheers,

David

P.S. If somebody opens their mouth and says they have been able to do this with their IDLWAVE emacs mode since 1986 I am going to scream. :-(
