Hi happy users of 5.6,
Could you tell me if IDLgrContour now uses its long-present Xrange and
Yrange? It used to ignore these thoughtfully included fields, and is not
an IDL .pro file for us to fix the shortcomings.
Cheers,
Pavel

P.S. Maybe RSI could put the buggiest code of each release on the web
and start a contest for the cutest fix? Now that we have user-submitted
pages, it would just be logical...
