Join Research Systems - pioneering developers of visual data analysis software. Great benefits, competitive salaries, fun company events - all part of the package.

We are seeking an IDL programmer to join our Quality Assurance team in testing IDL from early development through to release. The qualified candidate will be responsible for the following: creating a test plan; executing existing tests; developing and implementing new tests and procedures; creating and maintaining entries in a problem tracking database.

You'll have the opportunity to work as part of a team and provide assistance to other team members. This entails working with tech support to reproduce issues with released products while tackling technical issues with developers to resolve problems found during the test cycle. You will also work with product managers to ensure that requirements are appropriately implemented. Product documentation review is ongoing.

Required Minimum Skills and Qualifications

Twelve months experience with IDL.

Strong working knowledge of modern programming languages such as Fortran, C, C++, Java.

Ability to learn new technologies rapidly.

Excellent oral and written communication skills.

Participate in a team environment and communicate effectively.

Proven proficiency with one or more of the following: UNIX, Windows, Mac, Linux.

Knowledge of software development procedures and life cycle desired.

Experience in testing procedures and processes desired.

BA/BS degree in a Science related field or equivalent experience.
