Subject: 'remote control' for widgets?
Posted by s[1] on Mon, 16 Dec 2002 11:50:32 GMT

Hi all,

I try to progammatically set values of widgets like sliders or checkboxes.
When I use "WIDGET_CONTROL,myWidget,SET_VALUE=myValue", only the widget
gets changed, but the appropriate event is not generated.

What I am looking for is a technique taht allows me to change the value of
a widget _and_ generates the event that would have been generated if I
had changed the widget using the mouse or keyboard.

Thanks for all tips,

Sebastian
