Hi,

I'm running some code I've been running for a long time on Linux IDL installations. I'm sure I've run it with the Mac OS X beta version. Now however, I get the following error. Does anyone know how to resolve it? For reference, I'm running on a dual G4, IDL 5.6, and using eXodus 8 for the X server.

Thanks in advance, Pete Riley

```
IDL|uk2-> polar_plot,orbit=2
% Compiled module: POLAR_PLOT.
% Compiled module: UNKNOWN2DNUM.
% Compiled module: BIN_DATE.
% Compiled module: DOY2MD_ESM.
% Compiled module: YYDOY2DNUM.
% Compiled module: READ_SWOOPS_AVE.
% Compiled module: DNUM2YYDOY.
dyld: /usr/local/rsi/idl/bin/bin.darwin.ppc/idl dead lock (dyld
operation attempted in a thread already doing a dyld operation)
Trace/BPT trap
[chmeee] /Users/uk2/idl/lib/ulysses/edr/code%
```
