Subject: Using C++ programs with IDL
Posted by santha on Thu, 08 Dec 1994 16:40:09 GMT

Hello,
 I am trying to use a program written in C++ from within IDL on a sparc
station 10 runing SuNOS 4.1.3. I am using CALL_EXTERNAL function to do so.
When I try I get the error message, "ld.so object could not be mapped".

 To test whether I am using CALL_EXTERNAL correctly I wrote a simple 3 line
program in C (NOT in C++) and just followed the instructions in call_external.doc
file to call it within IDL. It works. Then I compiled the same program in C++
(This three line program compiles both in c and c++)and tried calling within IDL.
I got the above error message.

 It looks like that I have to do something special when using programs
compiled in C++. I greatly appreciate any help.
