Subject: problem inverting matrix

Posted by Lars Schmidt on Mon, 06 Jan 2003 14:32:37 GMT

Hello,

I desperately hope someone of you has got an idea.
I try to invert a matrix using "invert" of course with floating-point
values.
I get like explosion of values although the status variable I used with
"invert" did not return any error and I also used the "/double" keyword.
Has anybody an idea or experience with that. Are these numerical problems of
the gaussian ellemination??
Tanks in advance.

LARS SCHMIDT.
