Hi,

How do I get at the data that map_set uses
to plot coastline/continents?

I can find the actual files on my machine, I
just don't know how to open them.

in the directory:

/usr/local/rsi/idl/resource/maps/low

there are files:

clow.dat clow.ndx ... etc.

can I open them using some flags to the
openr command?

I don't care about formatting as long as
I can get an ascii representation of the
data.
