Hi

I hope this is simple to answer for someone. For me it's momentarily difficult.

I have read the ionjava Documentation and I understood my problem calling my routines comes from the not right setted !PATH variable.

There are three options to solve the problem.

Unfortunately there is no example how to set the !path by the java applet. I think this is the way I like to proceed.

Explicitly alter the value of the IDL system variable !PATH within your applet code.

May be someone else already has solved this problem.

regards

Reimar
