[Dave:]

> If I rewrite all my code to not make line plots but rewrite 2-d arrays, yes.

Assuming you have a 16-bit or 24-bit display, you can send your line plotting commands to a window (or an off-screen pixmap created by "window, /PIXMAP") then extract the image with "tvrd(/TRUE)".

There are lots of complications & subtleties associated with different colour models in IDL direct graphics. I suggest you read everything you can find on the subject at David's WWW site:
