Subject: Transparent surfaces?

Hi folks,

I haven't found this anywhere in IDL yet, but maybe someone out there has:

Are there any routines available to get transparent surfaces to plot in IDL or in PV-WAVE? For example, the SLICER would be an even more powerful tool if one could set differing transparency levels for given isosurfaces, slices, etc. (I guess I'm looking for POLYSHADE with a TRANSPARENCY keyword)

Thanks in advance,  
-Dick
