Subject: Is IDL-to-C-to-IDL call possible?

---

I would like to build DLM's containing system routines that take IDL functions as arguments like the built-in QSIMP(Func,A,B) does. To evaluate the user-defined function Func, obviously the system routine needs to make calls to the IDL interpreter. Are such calls possible (the External Development Guide doesn't seem to mention them)? Can someone show me a simple example?

Thanks.

Keh-Cheng
