As others have said, IDL runs very well under IRIX. The only complaint I
might make is that it doesn't make use of the MP capabilities of IRIX.

Are you looking to run it on a personal machine, or one owned by the
institute you're attending? If it's owned by the institute you might not
need to purchase anything if they have network licenses. IDL for UNIX
covers installation on Solaris, IRIX, Linux and others for network
licenses.
