```
: >IDL> randu = randomu(seed)
: >IDL> print, randu, seed
: Not random ...
```

Here is how I get around this:

```
rnd = randomn(s,10) & rnd = rnd(3)
```

As was mentioned, just don't chose the 1st element. If you need many random numbers, use eg `rnd = rnd(1:9)` Don't call `randomu` (or `randomn`) repeatedly.
