Hi,

for the first part of your answer, I think you misunderstood me, i was thinking about to put an IDLgrImage or IDLgrWindow, or what ever of these

image fusion.

Or as another solution would it be possible, do get the fusioned image as a truecolor image (256,256,3)-array out of an object.

> You better start polishing your C skills as there is no built in function
> for this in IDL.

idl, to program, the GUI and the rest and IDL is the only language i know.

but thanks for your answer

Kay
