Hey :)

Is there any way to stop this while debuging ?

I tried CTRL+C and CTRL+BREAK which sometimes helps but not in this case.

```
pro loop_it
  a = 1
  while (1) do a = a + 1
end

pro kill_idl
  print, 'start'
  ; debugger is here and you pressed accidentally 'F10'
=> loop_it
  print, 'stop'
end

*loop*,  
Tom
```
