Now, Craig, how in the world would you know this!? Please don't tell me you are running IDL 5.6. Didn't that just come out a couple of months ago? Goodness, you are getting 3-4 years ahead of yourself, aren't you. :-)

Cheers,

David

P.S. I just found another nifty feature in IDL 5.6 for Windows that I can no longer live without. (I realize the EMACS guys have been doing this since 1935.) Select a bit of code, go to the Edit menu and select Comment. Immediately commented out. Same to reverse it. Gosh, my wrist is getting better and better!
