Hello,

I am trying to get a function to use variable values that are defined in a higher level procedure. Since COMMON blocks can't be used in functions is there a way round this? here is an example of what i am trying to do;

Pro high_level

x=1

y=1

z=1

```
l=integrate('f_x',z)
end
```

```
function integrate,z
```

```
.....
```

```
.....
```

```
call function f_x
```

```
i=.....
```

```
return,i
```

```
end
```

```
function f_x, z
```

```
  w=x+y+z
```

```
return, w
```

```
end
```

Many thanks

Isa
