
Subject: License options when starting IDL

I have a machine with 6 node-locked licenses. On campus we have a floating license for 25 users. I would like to write (or borrow) a script to run on my machine with the node-locked license that will go out and grab one of the floating licenses, ONLY if all of its licenses are being used.

Can anyone point me to documentation on how to get the status the number of IDL licenses in use when a user starts up IDL?

Thanks!
