Subject: Overlaying axes on an image?

Hi,

I have a fairly simple problem, and I will probably find the right combination of commands if I stare at the IDL manuals long enough...but probably not since I have already struggled with the manuals for a couple of hours now.

Ok, here's the gist of the problem: I have a simple image (binary) file in which I want to overlay x and y axis. So, what commands should I use after, say "tvscf, imagearray", to annotate the image with x and y axis (with the ranges of my choosing, of course)?
