Can anyone tell me how I can create a window that will resize to remain the same size as the zoom window in an envi display group? Right now, everything works fine until the zoom window is resized.

I have tried using the user defined motion event to check the size of the zoom window. However, this is overkill in terms of code being executed, and it doesn't work if the user resizes the zoom window but doesn't move the mouse back inside the window.

Any help on this matter would be appreciated.

-Scott
