I am currently accepting consulting/contracting/permanent work involving either PV-WAVE or IDL. I have three years experience in both large application development and short-term consulting work using PV-WAVE. I am familiar with all facets of the product. I haven't used IDL as much, but I have used it enough to know that they are very similar.

Most of my experience is in image processing. My last contract involved writing a satellite image analysis tool for a DOD contractor. Prior to that, I designed and developed an image and volume data visualization system for the Air Force.

Please phone (402) 291-9046 and leave a message with my wife, Grace, if you are interested.
