
Subject: Error compiling procedure already compiled

I'm trying to learn IDLWAVE whenever I get time, which isn't much. I'm also still very new emacs, so I get lost pretty easily. When I save and .run a file that's already been compiled, my 2 pane emacs window splits into a 3 pane window with the following error in the 3rd pane. Is this normal? It doesn't seem to happen the first time I save and .run, only on subsequent attempts. The idl buffer window shows the command executed normally, but I'd like to know what's going on here. Thanks in advance for you tips,
Rob
