Hi everybody!

I am using the routine rs_test.pro (idl library). I have two data set,
the first one is a 105 elements array (x), while the second one is a
103 elements array(y).

I read the data, but when I use rs_test.pro the routine returns

%Unable to concatenate variables because the dimensions do not agree:

Y
% Error occurred at: RS_TEST 96
% \$MAIN\$
% Execution halted at: \$MAIN\$

Why? Where is the problem and it is possible to solve it?

Thank a lot!

Cheers

Steve
