Hi everybody!

I am using the routine rs_test.pro (idl library). I have two data set, the first one is a 105 elements array (x), while the second one is a 103 elements array(y).

I read the data, but when I use rs_test.pro the routine returns

```
%Unable to concatenate variables because the dimensions do not agree:
```

```
Y
```

```
% Error occurred at: RS_TEST          96
```

```
%          $MAIN$
```

```
% Execution halted at: $MAIN$
```

Why? Where is the problem and it is possible to solve it?

Thank a lot!

Cheers

Steve
