
Subject: color table in unix

I am a neophyte with IDL running in UNIX, so I apologize in advance if this is a really stupid question. When I ran IDL on a Mac, I had color table file that I replaced the default version with. On the Mac, I had permissions to change whatever I wanted in the resource:colors directory. What I would like to do is have that same color table file as my default in Unix, however I can't write to the ...rsi/IDL/resource/colors directory. Is there something I can put in my IDL startup file that will change the default color table file from the ...rsi/IDL/resouce/colors/colors1.tbl to the file I want to use?

Thanks,

Kay
