Hello,

is there a possibility to set the position of a contour plot  
in object graphics.

I want to draw 3 contour plots from a 3D dataset, similar to the  
images in the x- y- and z-plane of the thunderstorm demo.

I know how to provide the DATA\_VALUES to IDLgrContour, but i'm not  
sure whether or how I have to use the GEOM[XYZ] keywords to address  
the problem.

Or do I have to use 3 separate models and rotate them to the  
appropriate position ?

Thanks for any help,

Tobias
