I asked if any of my object programming 'feature requests' would make it into IDL 6 and was told simply that there wasn't enough demand. Please submit your feature requests!!! Especially the object ones as the most certainly overlap with my requests ;)

My top 5 list I currently lists:

- (1) operator overloading
- (2) proper inheritance mechanisms (i.e. avoiding namespace clashes that occur in structures)
- (3) public / private methods
- (4) a C-API interface to the object/heap variables.
- (5) Map objects

Cheers,

Randall
