
Subject: Floating point error

I am trying to scatter a vector "data" into an array "array" using array subscripts. "data" contains some NaNs.

This causes floating point exceptions, even though no "operation" is taking place.

```
IDL> help, i, j, h, data, array
```

```
I          LONG    = Array[176779]
```

```
J          LONG    = Array[176779]
```

```
H          LONG    = Array[176779]
```

```
DATA       FLOAT   = Array[176779]
```

```
ARRAY      FLOAT   = Array[720, 160, 24]
```

```
IDL> array[i,j,h] = data
```

```
% Program caused arithmetic error: Floating illegal operand
```

```
IDL> q = data          ;Copy data
```

```
IDL> q[*] = 0.0        ;Get rid of NaNs
```

```
IDL> array[i,j,h] = q  ;No problem
```

If this is a feature, it is going to make using NaNs very difficult.

Ken
