To: OS X IDL users
From: Ed Wright

This morning, I updated my Mac OS X to 10.2.4 from 10.1.5.

IDL will not run citing a license problem:

```
% LICENSE MANAGER: Feature has expired
```

```
Feature:    idl
```

```
Expire date: 01-Jan-2003
```

```
License path: /usr/local/rsi/idl_5.5/./license/license.dat:/usr/local -
```

```
/rsi/license/license_eval_idl_55.lic:/usr/local/rsi/license/ license_eval  
_idl -
```

```
_56.lic:/usr/local/rsi/idl_5.6/./license/license.dat:/usr/local/rsi -  
/license/license.dat
```

```
FLEXlm error: -10,32
```

```
For further information, refer to the FLEXlm End User Manual,  
available at "www.globetrotter.com"..
```

```
License file:
```

```
/usr/local/rsi/idl_5.5/./license/license.dat:/usr/local/rsi /
```

```
license/license_eval_idl_55.lic:/usr/local/rsi/license/licen se_eval_idl_56.
```

```
lic:/usr/local/rsi/idl_5.6/./license/license.dat:/usr/local /rsi/license/li  
cense.dat
```

IDL ran yesterday with such complaints.

After the upgrade, the /usr/local/rsi/bin path was missing from my path. The license file sits in /usr/local/rsi/license as before. I run the OS X IDL using a license server running on a Solaris box.

What happened?

As always,
Ed Wright
