This is a NVIDIA GeForce4 Ti 4600 adapter with dual out. I don't normally run graphics on the secondary monitor (I save that for email, IDL on-line help, and the ubiquitous IDL newsgroup reader), but it appears to run graphics fine. I don't notice speed difference from one monitor to the other.

There is an occasional "delayed refresh" with this set up that can be startling once in a while. I immediately think the dog has chewed the monitor chord again! But otherwise, it works great.

Cheers,

David
