This is a NVIDIA GeForce4 Ti 4600 adapter with dual out.
I don't normally run graphics on the secondary monitor
(I save that for email, IDL on-line help, and the
ubiquitous IDL newsgroup reader), but it appears to
run graphics fine. I don't notice speed difference
from one monitor to the other.

There is an occasional "delayed refresh" with this
set up that can be startling once in a while. I
immediately think the dog has chewed the monitor chord
again! But otherwise, it works great.

Cheers,

David
