If you want to shrink your minor ticks, you could try some
overplotting of axis with different lengths.

```
plot,findgen(10),yticks=9,yticklen=0.3  
axis,yaxis=0,yticklen=0.5
```

OR major and minor the same length, try something like
plot,findgen(10),yticks=9,yticklen=0.3,ytickname=replicate(' ',10)
axis,yaxis=0,yticks=3,yticklen=0.3

etc...

Cheers,
bob
